

Automatic Gate Systems **Autogate**

Enhancing
your home...

...with the perfect
balance between
function and appearance

Why invest in an Automatic Gate?

If you have a manual gate, the majority of the time it will be left open, maybe because of bad weather or just because you're in a rush to get to an appointment.

An automatic gate however will be closed for the majority of the time. There is the convenience and security of not having to get out of your car to open gates when returning to or leaving home, particularly at night or in rainy conditions.

Many insurance companies will also take into account the added security benefit of a reliable automated gate system.

You can also vet callers before they arrive on your doorstep with an audio or video intercom, allowing access at your discretion.

Increased safety for your pets, children (or grandchildren) when playing at the front of your property, as road access is controlled by you.

We offer many types and designs of automatic gates to enhance your home. If you already have manual gates fitted, an automation system can usually be added.

For quality, reliability and value for money choose an automatic gate from Autogate.

A System to Suit You from Autogate

Once you contact us a free site survey is arranged at a convenient time and date for you, in order to ascertain your requirements and wishes.

Existing or New Gates

The majority of existing gates can be automated. Our technician will be able to advise on any changes necessary for conversion such as the strength and condition of the gates and posts.

All new gates supplied by Autogate are of the highest quality and are available in a variety of styles and materials. Function and appearance are of equal importance, as a gate that enhances the look of your property will also add to its value. Our technicians can advise on gate types, sizes, posts and cabling required. Also with our bespoke service, gates can be manufactured to include names and decoration specific to you and your property.

Operating the Gates

Gates can be automated to swing or slide open, whether as a single gate or as a pair. Swinging gates can have the opening mechanism concealed underground as well as mounted on the gate.

The most suitable installation will depend on the position and type of gate chosen.

Control of your Gate System

There are a number of access control solutions to be considered for your automatic gates. You want control of your gates by a hand held remote control, but you must also consider trade deliveries and collections as well as friends and family visiting either on foot or by car.

Intercom Systems

A large range of audio and video intercom systems are available in a variety of finishes from brass to stainless steel. These can be connected to a dedicated control box in your home or interfaced with your existing telephone.

Keypad Entry

This allows remote access for visitors. Programmed to your individual number code, keypads are easily incorporated into an intercom system.

Remote Controls

Using a unique secure frequency, enabling you to open your gates from inside your car when leaving or returning to your property.

Timer Controls

This allows gates to be opened and closed freely for deliveries (such as the postal service) at specific times of the day only.

Vehicle Induction Loops

These are installed under your driveway surface. Allows gates to open upon a vehicle's arrival, and can be used in conjunction with a timer control for specific delivery times.

Safety and your Gate System

The safe, reliable operation of your gates is of paramount importance and so a number of features can be included in your system to guarantee this.

System Backup

All automatic gate systems installed by Autogate have a manual over-ride built in. In addition an emergency battery backup can be incorporated in the event of power failure (24v systems only).

Photocells

These create an infrared beam across the opening. Ensures the gates do not accidentally close upon a vehicle or other possible obstruction that remains in the entrance area.

Lighting

General outdoor, daylight sensitive or motion detection lighting can be included to enhance the security and appearance of your property's entrance.

Maintenance of your Gates

Since our start, we at Autogate believe that the backup service we provide is as important as our installation service. Maintenance contracts are offered on all gate installations. These are tailored to the type of gate fitted, its usage and the environment of its location.

In the event of a system failure, whether in part or total, one of our highly skilled technicians will respond promptly and efficiently.

Metal Gates

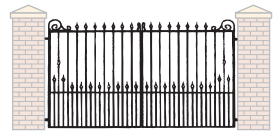

- Metal gates can be automated in several ways
- Metal gates are usually hung either on brick/stone piers or metal posts and can be hung on existing brickwork or posts
- Metal gates and posts can be supplied black primed or red oxide finished ready for painting
- Metal gates and posts can also be supplied zinc sprayed, powder coated or painted in any colour from the RAL colour range (www.ralcolor.com)
